Clemons Self-Cleaning Suction Screens

Field Tested, Dependable Protection for Pumps and Water Systems

If you irrigate, you know how important it is to keep equipment running smoothly and water flowing freely. Whether you are pumping water from a stream, canal, river or irrigation ditch, you need the water to be free of trash and debris that could block water flow and damage the pump or clog water-distribution equipment.

The Clemons self-Cleaning Suction Screen is galvanized or epoxy coated and utilizes a heavy 12, 18, or 24 mesh stainless steel screen designed to increase pump efficiency. The screen continuously removes trash and debris from irrigation water that costs time and money in fuel, pumping efficiency and maintenance costs. It can be used for agricultural, turf, industrial, centrifugal or turbine pump applications.

Part #		In Stock	Price
CW 1000	Rotating Screen WW 950 to 1350 GPM	4	\$2,267.15
CW 2400	Rotating Screen MD19 1800 to 2600 GPM	2	\$2,900.00
